Bowen Luo

Portfolio: plopor.github.io | Email: bowen.luo@gmail.com | Github: https://github.com/plopor

Languages: C#, C++, C, Python, Java, Javascript
Interests: AI/ML, Graphics, Networks, Cloud/Distributed Computing, Compilers, DBs

EXPERIENCE

Arista Networks | **Software Engineer** (C++, Python)   *Sept 2022 - Dec 2022*
- Individually developed network switch CLI commands to asynchronously query information on routes in the forwarding tables across VRF instances, **improving routing telemetry data**.
- Prototyped improvements to routing table adjacency trimming by consolidating optimizations done during next-hop creation and interface-down adjacency review.
- Built test framework features to detect tight loops in tasks of ASIC platform agents at runtime.

Oracle Netsuite | **Software Developer** (Java, JavaScript)   *Jan 2022 - Apr 2022*
- Planned architecture of and implemented objects/services for a new data storage (UMD) and manipulation pipeline; wiring (Guice), persisting, and exposing SQL entries **to support Oracle Netsuite platform rewrite**.
- Built frontend pages (React/Preact) along with necessary data pipeline services and endpoints, researching and implementing UMD record querying for request validation.

Oracle Netsuite | **Software Developer** (Java, SQL)   *May 2021 - Aug 2021*
- Individually wrote and upgraded endpoints to fetch and manipulate SQL data.
- Implemented scheduled SQL tasks and contributed to a web-based frontend (UIF, JS), **delivering features for client requests**.

Martello Technologies | **Software Developer** (C#)   *Sept 2020 - Dec 2020*
- Individually upgraded the backend codebase of a data consolidation platform (ELK Stack, Akka.NET), migrating between major versions of Elasticsearch and **creating new data visualization options**.

VirtaMove | **Software Developer** (C++)   *Jan 2020 - Apr 2020*
- Individually developed a feature detecting the memory-mapped compiled bitness for Windows binaries, **improving app migration success rates** across Windows OS of varying architectures.
- Individually developed a native file and registry rehosting service migrating between ma tching OS, working with kernel interfacing Windows API to query services, registries, and binaries.

Amgine | **Junior Developer** (C#, Python)   *May 2019 - Aug 2019*
- Researched and prototyped improvements (GRU, ELMo word embedding, attention layers) to an NLP ML model (Keras, Tensorflow), **improving sentiment analysis of emails.**
- Wrote a custom JSON parser and an email tokenizer to facilitate training data transfer/generation.
- Generated C# classes (T4 text templates) for dynamic JSON parsing.

EDUCATION

University of Waterloo | **Bachelor of Computer Science** | **Combinatorics and Optimization Minor**
University of Chicago | **Masters in Computer Science Candidate**   *May 2024 expected graduation*

PERSONAL PROJECTS

Photorealistic Raytracer | C++
- Demonstrating supersampling anti-aliasing, mirror/glossy reflection and refraction, soft shadows, texture and bump mapping, and Phong illumination. Scene rendering specified with LUA.

Connect - **Hack the North** | Java, Android Studio
- Service to send/receive NDEF messages using NFC. Prototyped sending images and PDFs as URI.

ML Models | Java, Python
- Semi-supervised image classification model on MNIST using K-means and KNN for cluster labeling.
- Perceptron-based neural networks demonstrating evolutionary and back-prop algorithms.
